REC_DS using C_Week 7_COD_Question 2

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Priya is developing a simple student management system. She wants to store roll numbers in a hash table using Linear Probing, and later search for specific roll numbers to check if they exist.

Implement a hash table using linear probing with the following operations:

Insert all roll numbers into the hash table. For a list of query roll numbers, print "Value x: Found" or "Value x: Not Found" depending on whether it exists in the table.

Input Format

The first line contains two integers, n and table_size — the number of roll numbers to insert and the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert.

The third line contains an integer q — the number of queries.

The fourth line contains q space-separated integers — the roll numbers to search for.

Output Format

The output print q lines — for each query value x, print: "Value x: Found" or "Value x: Not Found"

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: 5 10
    21 31 41 51 61
    3
    31 60 51
    Output: Value 31: Found
    Value 60: Not Found
    Value 51: Found
    Answer
   #include <stdio.h>
    #define MAX 100
    // You are using GCC
    void initializeTable(int table[], int size) {
      for(int i = 0; i < size; i++) {
         *(table + i) = -1;
      }
    }
    int linearProbe(int table[], int size, int num) {
      int index = num % size;
2^{4080} int j = 0;
```

4080121

```
while(table[index + j] != -1 && (index + j) < size) {
    j++;
}
       if(table[index] != -1) {
         if((index + j) == size) {
            return -1;
         table[index + j] = num;
       else {
         table[index] = num;
       return 0;
    void insertIntoHashTable(int table[], int size, int arr[], int n) {
       for(int i = 0; i < n; i++) {
         linearProbe(table, size, arr[i]);
       }
    }
    int searchInHashTable(int table[], int size, int num) {
       int index = num % size;
       while(index < size) {</pre>
         if(table[index] == num) {
        return 1;
         index++;
       return 0;
    int main() {
       int n, table_size;
       scanf("%d %d", &n, &table_size);
       int arr[MAX], table[MAX];
       for (int i = 0; i < n; i++)
         scanf("%d", &arr[i]);
initializeTable(table, table_size);
insertIntoHashTable(table, table_size);
       insertIntoHashTable(table, table_size, arr, n);
```

```
int q, x;
scanf("%d", &q);
for (int i = 0; i < q; i++) {
    scanf("%d", &x);
    if (searchInHashTable(table, table_size, x))
        printf("Value %d: Found\n", x);
    else
        printf("Value %d: Not Found\n", x);
}

return 0;
}
Status: Correct

Marks: 10/10</pre>
```
